

PBB Series CNC Sheetmetal Pressbrake

La série de presses-plieres synchronisées à CNC

PBB

PBB Series CNC Sheetmetal Pressbrake

Streamlined, high speed, high precision CNC sheetmetal press brake
Electro-Hydraulic full loop servo system controls upper beam, ensuring
consistent parallelism.

Standard European style tooling with wide variety of options available for
North American tooling styles

Standard X-axis back gauge is positioned by servomotor-driven ball screws
and moves on precision linear guides.

Standard CNC-controlled automatic crowning works in the background
to prevent over-bending or under-bending of portions of long workpieces.

Control Technology

PBB series press brakes utilize a full loop electro-hydraulic servo to synchronize the Y1 and Y2 axes for perfectly parallel movement of the upper beam relative to the lower tooling. The CNC controller continuously monitors the actual distance of each Y axis to the lower table to compensate for off-center loading or the use of blanks with asymmetrical shapes or pre-punched openings.

The PBB CNC control also automatically provides the proper amount of lower table crowning, avoiding under-bending of the midsection of long workpieces and the over-bending often resulting from pre-crowned fixed-table machines and improperly adjusted mechanical devices.

Crowning Compensation

The PBB and PBH series machines are constructed with a three-piece lower table; the outer sections are fixed and the middle section is moved upwards hydraulically by multiple cylinders controlled by the DELEM controller.

Hydraulic compensation system for worktable

Mechanical compensation system for worktable

No compensation system on worktable

Type of BackGauges

Stop-finger structure

X Standard

X-R (option)

X-R-Z₁-Z₂ (option)

Type of BackGauges

X-R-Z₁-Z₂-X₁ (option)

X₁-X₂-R₁-R₂-Z₁-Z₂ (option)

Upper Tool Clamping

Standard
Upper tool mechanical wedge clamping

Upper tool mechanical fast clamping(option)

Upper tool hydraulic clamping(option)

Lower Tool Clamping

Standard
Lower tool 2-V clamping

Lower tool 1-V clamping(option)

Lower tool multi-V clamping(option)

Front Sheet - support

Step-adjust front sheet-support

Adjustable front sheet-support along the linear guide(option)

Hydraulic front bend help(option)

Safety Guard

light curtain safety device (option)

CE standard laser safety device (option)

CE标准光幕安全装置(选配)
CE standard light curtain safety device (option)

CNC system

Standard DELEM DA-56W

The graphical programming, bend sequence computation and 2D simulation provide a user-friendly and fast programmable CNC for press brakes.

Programming the Delem DA-56 is simply drawing the profile of your product on the screen. Simulation of the bend sequence is done with the userfriendly bend determination tool. With one simple keystroke, the CNC program is calculated and stored.

- Many facilities are supported such as:
- 2D graphical programming.
 - Bend sequence determination
 - Crowning control
 - Servo, frequency inverter and AC control
 - USB interface for easy connection of external devices (keyboard, mouse, etc.)

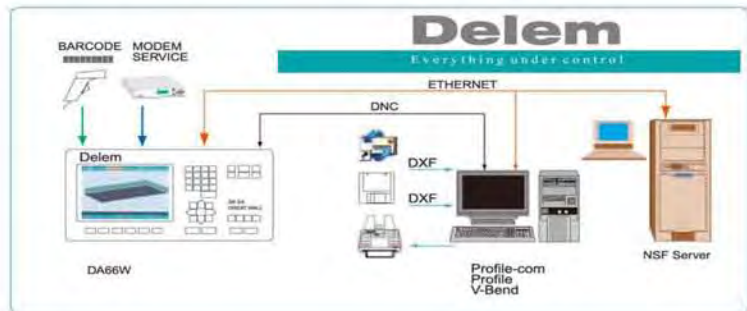

Optional DELEM DA-65W

The graphical programming, bend sequence computation and 2D simulation provide a user-friendly and fast programmable CNC for press brakes.

Programming the Delem DA-66W is simply drawing the profile of your product on the screen. The bend expert program automatically calculates the optimum bending sequence whereafter you can watch a 2D simulation of your product showing you how to place it in the machine. Many facilities are supported such as:

- Error message system and help texts to warn you for faulty programming, operation errors and machine errors. This saves a lot of time finding out what is wrong.
- Real-time Windows system for multitasking and file management.
- Standard Ethernet interface for easy Windows Networking.
- USB interface for easy connection of external devices (keyboard, mouse, etc.)

System Features

- Patent WinCE platform for press brake application, instant shut-off keep system reliably running
- 10.4" TFT color LCD, real scale display machine, tooling and products, easy to use
- 2D programming, automatic bend sequence calculation, Automatic collision detection
- Calculating of the crowning compensation to the worktable
- Integrated A graphical analysis tool
- Self-learning correction database
- Network and Remote diagnostics
- System diagnosis

System Configuration

- Color LCD display
- 10.4" TFT, high brightness, 800 x 600 pixels
- 200MHz microprocessor
- Memory capacity 32M
- Standard Windows networking
- USB flash memory drive

(Options available for other CNC controllers of Delem or Cybeclec)

PBB

PBB Series CNC Sheetmetal Pressbrake

Standard Configuration

- CNC controller is Delem DA56 from the Netherlands
- Hydraulic system is a full-closed loop electro-hydraulic servo synchronous control system from Germany
- Worktable is equipped with automatic CNC controlling hydraulic crowing system
- Backgauge has one CNC X axis, it is driven by AC servo motor, moved with ball screw and guided by linear guide, the stop-finger can move easily along the linear guide
- Supply one set of European type upper tool and mechanical wedge clamping
- Supply one set of 2-V fast change lower tool
- The front sheet-support position can be adjusted step by step along the worktable

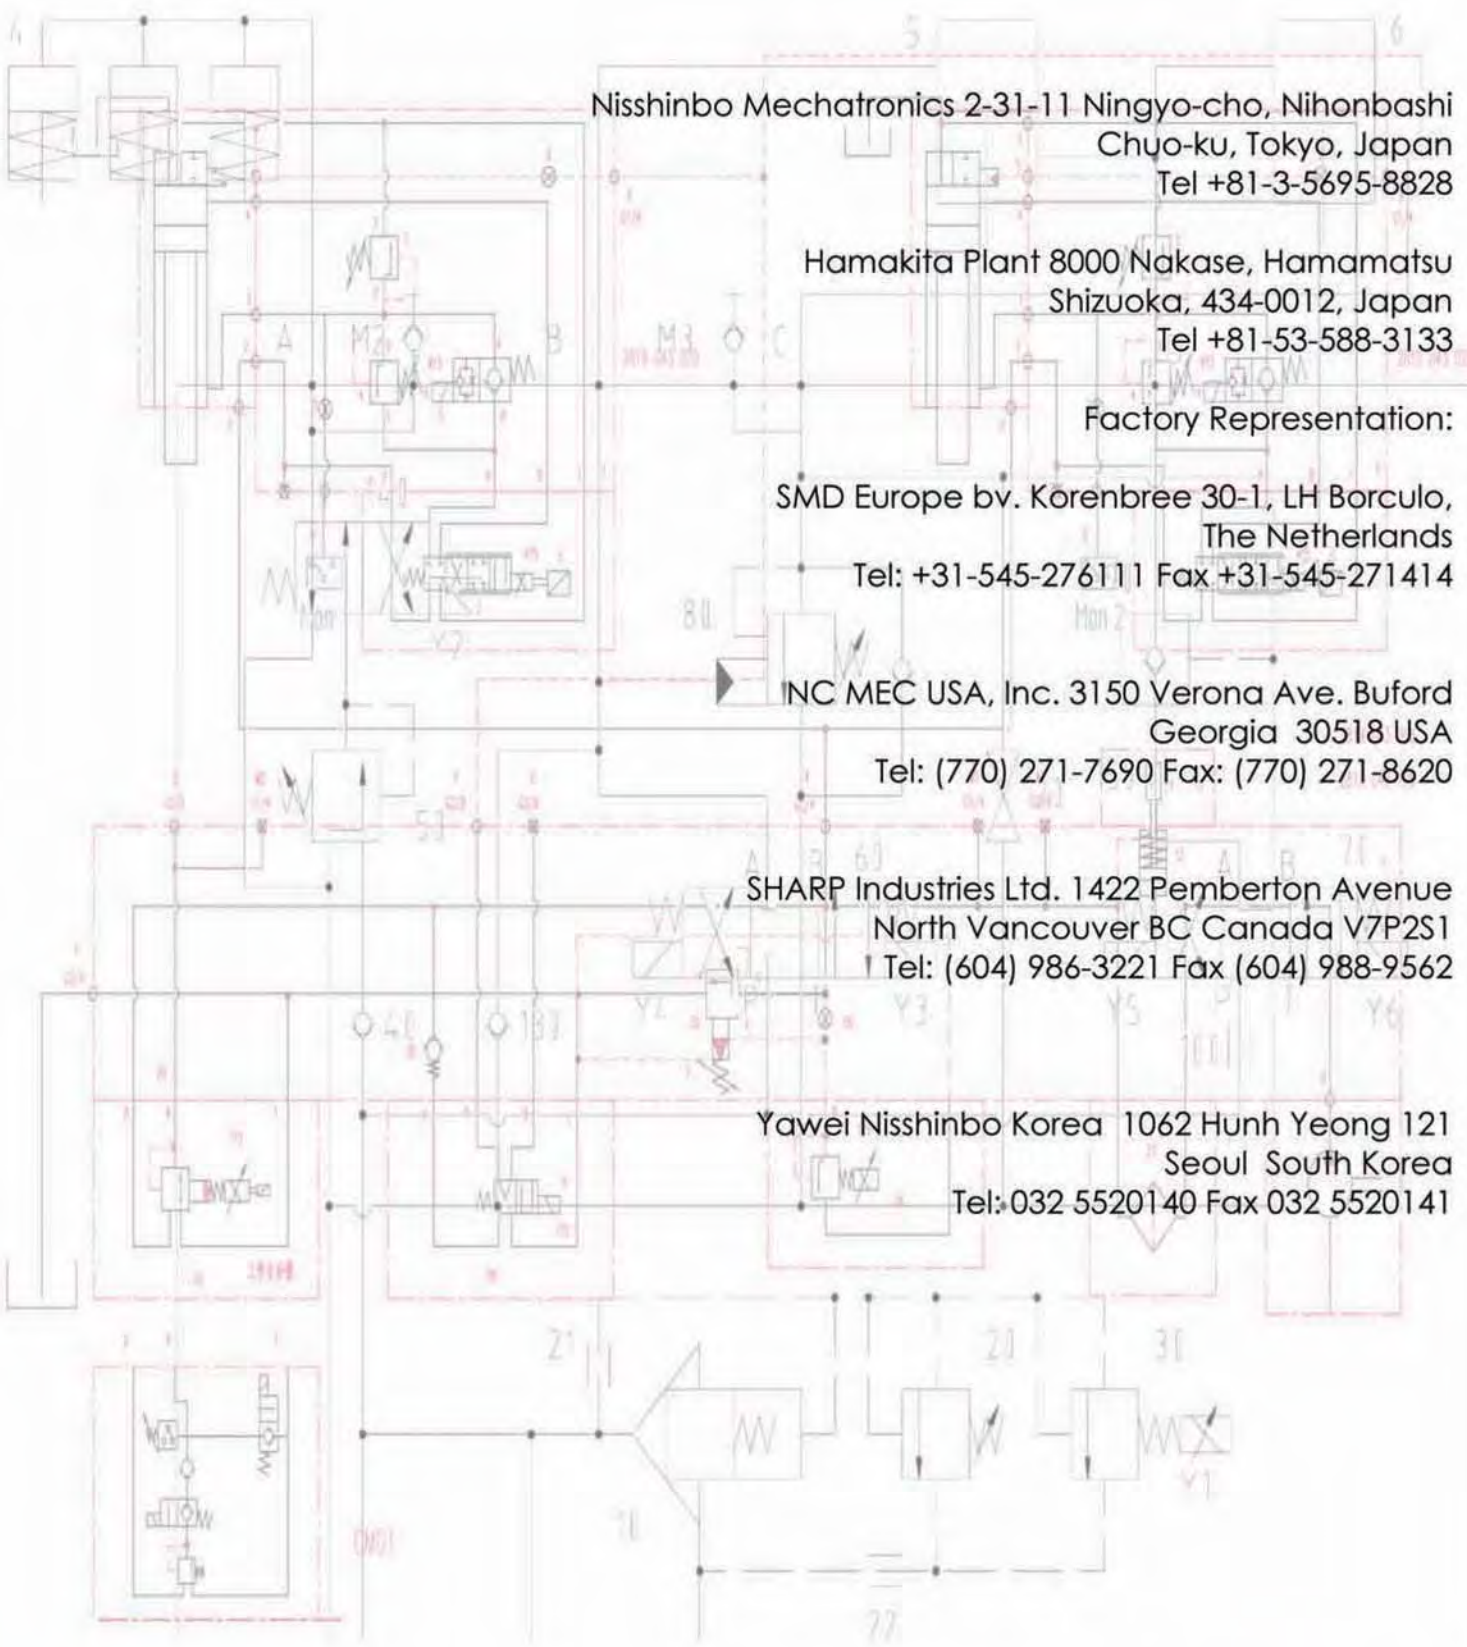

2-Vworktable
